

# ***Complying with the European Biocides Regulation***

Looking for experienced specialists to accompany you in registering your disinfectants, preservatives, pest control, and other biocidal products?

ToxMinds provides regulatory support and develops the documentation required to register biocidal products according to the Biocidal Products Regulation (EC) No. 528/2012 (BPR).

Our staff is experienced in the development of the documentation in the context of previous and current EU legislation (BPD/BPR). Given the complexity of the BPR and our strong background in toxicological and environmental sciences, we focus specifically on developing scientifically defensible hazard, exposure and risk assessments, higher tiered, if necessary.

**Our services related to biocides under the BPR include:**

- Thorough desktop research, scientific review of available data and data gap analysis relative to BPR requirements
- Advice on testing strategies and management of testing programmes
- Development of product authorization dossiers and R4BP
- Preparation of full risk assessments including all relevant exposure modelling
- Scientific advice to deal with complex toxicological profiles threatening the success of authorizations or leading to unfavorable RCR values or PEC/PNEC ratios
- Post-submission support (e.g., client representation with – and response to – authorities)

Whether you require support with the preparation of a **complete BPR registration package** or simply with **individual or scientific aspects** of the required BPR assessment, our services are available for you when and where you need them.

Contact Dr. Thomas Petry and Dr. Francesca Tencalla to discuss how ToxMinds may help in achieving registration of your biocidal products.
