
BIOCIDAL PRODUCT REGULATION

Implemented in 2013, the Biocidal Product Regulation (EC) No. 528/2012 (BPR) seeks to harmonise the European biocides market by ensuring safety standards for humans and the environment in the manufacture and use of biocidal products.

ToxMinds develops the documentation required to register biocidal actives or products in all product types. Given the complexity of the BPR and our strong background in toxicological and environmental sciences, we focus specifically on developing scientifically defensible hazard, exposure and risk assessments.

Our **services** related to **biocidal actives** and **products under the BPR** include:

- Development of product authorisation dossiers and supporting documents for all product types
- Scientific advice to deal with complex toxicological or environmental profiles threatening the success of authorisations
- Post-submission support (e.g., client representation with – and response to – authorities)

We support our clients with the preparation of a complete BPR registration package and also with individual elements or scientific aspects related to their registration requirements.
