

# PRODUCT STEWARDSHIP

Supporting safety, environmental protection and regulatory compliance within your chemicals life cycle

Product stewardship is the practice of making safety, environmental protection and regulatory compliance an integral part of the life cycle of chemicals. ToxMinds supports companies by helping them to characterise the risks associated with the manufacture and use of their products. We provide client-tailored training on topics related to safety and regulatory compliance and develop the documentation to support and communicate the safety of your product.

Our **product stewardship services** include:

- Development of science-based strategies and documentation to support chemicals or products under regulatory or public scrutiny
- Client-tailored training on topics related to product safety & regulatory compliance
  - Principles of human & environmental hazard, exposure and risk assessment of chemicals
  - Hazard-specific endpoint training (e.g., skin sensitisation, endocrine disruption, aquatic toxicity)
  - Regulatory frameworks and related IT tools (e.g., IUCLID software packages, CHESAR)
  - QSAR & REACH/BPR specific exposure modelling tools
- Development of REACH-compliant extended Safety Data Sheets (eSDS)
- Science advocacy and product defence
- Communication of (eco)toxicology and risk assessment findings to various audiences with different levels of scientific knowledge
